Greatest System in the World for beating the Roulette Wheel

This system is very easy to employ and it works!

There are a great variety of bets that can be made on a roulette wheel. We are concerned with what is called a **street** ("trio") bet and a **split** bet. You can make a trio bet by placing a chip on the line separating the dozens betting area from the columns of numbers. So a chip on the number 7 line on the layout will cover the numbers 7, 8 and 9. Some casinos will also allow you to put the chip on the line on the opposite side of the column of numbers, which in this case would be number 9. A trio bet pays 11:1 and a split pays 17:1.

There are two things that make this system work and both **MUST** be employed in order for my system to work. **ANY** deviation from these two things and you are not using MY system. Please keep in mind that it's very simple.

The first thing is we are looking for trends. The second thing is we immediately act on them when we see them. Here's how we beat the Roulette wheel by shifting the odds in our favor.

We start by looking for the last two numbers the ball has fallen on. Then find out which two streets, as in a trio-bet, the numbers correspond to. If the last two numbers the ball has fallen on are in the same street then go back as many spins as you have to until you have the last two streets the ball has fallen on. For instance, if the last two numbers the ball has fallen on are 12 and 32, then you would be concerned with the two streets covering the numbers 10,11,12 and 31,32,33. Say the last two numbers the ball has fallen on are 4 and 6 then look at the last three numbers the ball has fallen on. If the last three numbers were 4,6 and 26 then you would be concerned with the 4,5,6 and 25,26,27 streets. Just go back as far as you have to go. We are only interested in the last two streets hit.

Make a trio bet on the last two streets using an equal amount of money on each of

the trio bets. Never deviate from you wager on each of the trio bets. If you bet a total of $6 ($3 + $3) do not deviate from that amount. You must decide beforehand how much you are going to bet when you are betting **low**. Keep doing this. We are following trends now.

Keep this up until one of the trio bets wins. Now, since you are making two trio bets at a time, you are playing at 5:1 odds. If, for instance, you bet $6 and one of your trio bets wins, you make a profit of $30 since on the winning trio bet you don’t lose your wager and you also get $33 on the winning trio bet. That is a win of $33. However, you lose on the other $3 bet. So, since you are betting a total of $6 in this example and you win $30 your real odds are 5:1.

Now here comes the really exciting part. When you win, bet all of the money you won, again, on the last two streets the ball has fallen into. You are playing with the casino’s money now. **The ball has become really hot now and has a very good chance of falling into one of numbers in the last two streets hit! Keep betting the amount of the money won (if you bet $6 that would be $30), no more or no less until you lose.** If, for instance, you had a low bet of $6 and you won, you would win $30. Then you would take the $30 and bet it on the last two streets the ball fell on again. If you lose you would go back to your of $6 but if you win again you would win $150.Then you would bet $30 again on the last two streets. Keep betting at the $30 level until you lose.

If the ball falls on 0 or 00 just treat the 0 and 00 as another street. In that case you should make a **split** bet on the 0 and 00 by placing a bet on the line between the 0 and 00. Be very careful not to make a five number bet accidentally by placing the chips at the convergence of the line separating 0 and 00 from 1,2,3. We don’t want to do that. That is the **worst bet** on the entire Roulette layout since it gives the house a 7.89% advantage.

As I said a split bet pays 17:1. So if you win with a combination split (0, 00) bet and a street bet and the split bet wins you will win at 8:1 odds. A high bet of $30 for instance would net you $240. Keep in mind though that you should not

change your betting strategy. Keep doing this until you lose – then revert back to your low bets and start the system all over again.

This system is very easy as you can see but don’t be fooled. It is a **very hot** system. I win consistently with this system in no small way.

Why casino executives fight mathematical gambling systems

Casino Gambling Software: Baccarat, Blackjack, Roulette, Craps, Systems, Basic Strategy

Software for Lottery, Lotto, Pick 3 4 Lotteries, Powerball, Mega Millions, Euromillions, Keno, Horse Racing, Blackjack, Roulette, Baccarat, Sports Betting, Gambling, Probability, Odds, Statistics, Mathematics
